

Model 100 Precinct Ballot Tabulator / Scanner

On November 8th, the Stanislaus County Elections Office introduced the second of three stages to implement our new voting system.

Stage one introduced optical scan voting ballots. Stage two allows Stanislaus voters to cast their ballots at the polls on the Model-100 precinct-based, voter-activated, paper ballot count tabulator.

Each poll will have a Model-100. After marking the ballot, each voter will personally and confidentially insert their voted ballot into the Model-100 which sits directly over the ballot box. To promote ballot integrity and voter intent the Model-100 will alert the voter to an over-voted race and an under-voted ballot before accepting the ballot. Then the Model-100 tabulates the voted ballot.

The Model-100 has been certified by the United States federal government, the State of California and used in thousands of actual elections worldwide.
